

Monitoring, Evaluation & Learning (MEL) Framework

Program: School Health Clubs for Menstrual Health & Hygiene

Program Overview

This initiative aims to establish School Health Clubs in 60 government secondary schools across two districts in India, to improve menstrual health and hygiene (MHH) awareness, practices, and peer engagement among adolescent girls. The program integrates health education, peer support, and supply-side linkage with frontline workers.

Theory of Change

If adolescent girls participate in regular, safe, and stigma-free School Health Club sessions, and are equipped with accurate information and supportive environments, then their MHH knowledge and practices will improve, resulting in better health, attendance, and agency in school and community life.

MEL Objectives

- Track implementation fidelity and reach of School Health Club activities
- Measure change in MHH knowledge, practices, and school attendance
- Identify barriers and enablers through feedback loops with teachers and peer leaders
- Document adaptive practices and improvements for scale-up

Key Indicators

****Output Level:****

- % of schools conducting monthly MHH sessions
- # of peer leaders trained
- # of IEC materials distributed

****Outcome Level:****

- % of girls reporting improved menstrual hygiene practices
- Average number of school days missed due to menstruation
- % of girls confident to discuss menstruation in peer group

Monitoring, Evaluation & Learning (MEL) Framework

Program: School Health Clubs for Menstrual Health & Hygiene

Monitoring Tools

- Monthly school reporting formats
- Pre/post session assessments
- Peer leader feedback forms
- Spot checks by health coordinators

Evaluation Approach

A baseline and endline study using mixed methods (quant surveys + FGDs) will be conducted. Analysis will focus on changes in MHH knowledge, behavioral practices, and absenteeism. A qualitative process evaluation will capture implementation fidelity, community norms, and adaptation needs.

Learning & Feedback

Bi-annual reflection workshops with peer leaders, teachers, and health officials will inform adaptations. Key insights will be shared through briefs and learning notes, and used to refine session content and tools.
